TASK 4: DATA MANAGEMENT

Introduction

This task involves the preparation of water quality monitoring data to ensure data quality and compatibility with TCEQ requirements.

Data Management Roles

Basin Planning Agency Data Management

The Planning Agency Data Manager is responsible for preparing data sets of quality-assured data in accordance with the Data Management Reference Guide (DMRG,

http://www.tceq.texas.gov/waterquality/data-management/dmrg_index.html) for submittal to the TCEQ. Each data set submitted to the TCEQ should contain data collected under a single QAPP. The Planning Agency Data Manager will review each data set using the Data Review Checklist (Exhibit 4A), and will prepare a Data Summary (Exhibit 4B) to be submitted with each data set. The Data Summary will contain basic identifying information about the data set, information regarding inconsistencies and errors identified during data verification and validation steps, and/or problems with data collection efforts.

TCEQ Data Management

The TCEQ staff will receive and review data sets, and other requests for new codes/monitoring stations, or corrections to existing data. The TCEQ conducts automated reviews of incoming data sets and reviews data verification reports generated by SWQMIS against specifications in the QAPP.

Preparing and Reporting Data

Formatting Data

Data is formatted for upload into SWQMIS by creating two text files. The text files, called the 'Events File' and the 'Results File,' are formatted using the data dictionaries defined in Chapter 7 of the DMRG. The text files are related by a unique identification number, the Tag ID. A Tag ID is assigned to each sampling event. The 'Events File' has a sampling event, with a unique date, time and place (depth & station). The 'Results File' contains each measurement that was collected and analyzed for that event; so there are many results for each event.

Generic Sample/Events File Structure

Tag|Station Id|End Date|End Time|End Depth|Start Date|Start Time|Start Depth|Category|Type|Comment|Submitting Entity|Collecting Entity|Monitoring Type

Generic Results File Structure

Tag|End Date|Parameter|GT/LT|Value|LOD|LOQ|Qualifier Code|Verify Flag

When formatting the two files, the vertical bar typically found on the same keyboard key as the backslash is used to delimit the fields. This vertical bar is called a "pipe", and so the text files are commonly known as "pipe-delimited" text files. It is important to use the "pipe" because there is a chance that other commonly used delimiters, such as commas and slashes, will be used in the "Comments" field and therefore cause a problem when loading the fields into a database. The text files should only contain the data and no header rows, since these are problematic for the SWQMIS loader program.

Coding Data (Tag_id, Tag Prefix, Submitting Entity, Collecting Entity, and Monitoring Type)
The *Tag_id* is a unique alphanumeric identifier for each sampling event that links the sampling event in one file to the measurement values in the other file, in a one-to-many relationship. The *Tag Prefix* is the unique one or two digit letter code added to the beginning of the *Tag_id* and identifies the Basin Planning Agency that is preparing the data set.

A list of valid Tag Prefixes can be found in Chapter 5 of the DMRG at: www.tceq.state.tx.us/compliance/monitoring/water/quality/data/wdma/dmrg index.html

Submitting Entity codes identify the agency listed in the QAPP as the entity responsible for submitting the data to the TCEQ (QAPP Entity), Collecting Entity codes identify the organization responsible for collecting the data (field entity), and Monitoring Type codes identify the type of monitoring under which the reported data was collected.

Example: SR|LW|RT means the data was submitted under the Sabine River Authority (SR) QAPP,

and collected by the City of Longview (LW) without targeting any certain

environmental condition (RT). The Tag prefix would be "J" which is assigned to the

Sabine River Authority.

Lists of valid entity codes can be found in Chapter 4 of the DMRG at: www.tceq.state.tx.us/compliance/monitoring/water/quality/data/wdma/dmrg index.html

Biological Electronic Data Reporting

There is no difference in format between biological data flat files and routine surface water quality monitoring data flat files. Partners and contracted monitoring entities must report biological data via pipe delimited flat files.

A separate Tag ID should be assigned for each type of data collected during a biological sampling event. SWQMIS uses the Sample Event and Sample Set structure. This structure is a one-to-many relationship with one Sample Event (the entire biological monitoring event) containing multiple Sample Sets. Some Sample Sets are biological (Nekton Electrofishing, Nekton Seining, etc) and some are non-biological (24 Hour Data and Routine Chemistry), but all are included in the Sample Event.

Each biological Sample Set must include the Parameter Code 89888 which identifies that Sample Set as containing biological data. The value selected for Parameter Code 89888 will be determined by the Sampling Category (see Table 12.1 in the DMRG). To see how parameters are grouped under each sampling category, refer to Chapter 6 of the DMRG Commonly Reported Parameter Codes for Biological Data.

BLOB Files

Reporting biological monitoring data also requires attaching Binary Large OBject (BLOB) files to the SWQMIS Sample Events and/or Sample Sets. BLOB files must be named in a format that includes the station ID, water body name, sample end date, and type of file (e.g., 13486-GreensCreek-24May2013-HabitatTransectWorksheets). BLOB files can be attached at the sample event and sample set levels in SWQMIS by authorized TCEQ staff.

Typically, there are four BLOB file types for each SWQMIS Sample Event for biological data:

- Monitoring summary information including:
 - Aquatic Life Monitoring checklist
 - A site map of the sampling area of sufficient scale to annotate both the sampling reach and transect lines
- Nekton voucher photos (unless actual voucher specimens are retained)
- Stream Physical Characteristics Worksheet with the transect data
- Habitat transect photos
- Any other additional file as discussed between the collector and the TCEQ CRP Project Manager.

For individual SWQMIS Sample Sets/Tag ID there can be more than one attachment. All photographs for one SWQMIS Sample Set/Tag ID should be combined into one document that includes descriptive information for each individual photograph (preferably a .pdf, but a Word document, or Power Point file will suffice). Electronic data should include a README.txt file that includes a list of each BLOB file, a description for each BLOB file, and a designated place for the BLOB file to be attached (either the SWQMIS Sample Event ID, or specific Tag ID).

Please reference Chapter 12 of the Data Management Reference Guide (DMRG) for additional information. Guidance in the SWQMIS User's Guide details how the BLOB files are to be attached in SWQMIS. An explanation of how biological data is tagged can be found in Exhibit 4C.

TCEQ CRP Project Managers will accept hard-copies of biological data forms in addition to, rather than in lieu of, electronically formatted data. The electronic files submitted should consist of the ASCII pipe-delimited flat files, plus any additional files specified by the TCEQ CRP Project Manager or contract.

Required Files for Biological Data Submissions:

- ASCII Pipe-Delimited EVENT Text File
- ASCII Pipe-Delimited RESULT Text File
- README.txt File
- BLOB Files

Event File and Results File Format

The generic format of the Sample/Event file is the same as routine data. The Results file will have one

or more records associated with each Event record. Please remember to include one record for parameter 89888 in each biological Sample Set.

README File Format

The generic format of the README file is shown below:

File | Description | Tag ID

If the file will be attached to a Sample Event, please enter 'Sample Event Level' in the Tag ID field.

Composite Samples

Composite samples require entries in several additional fields in the Events file. These fields are Startdate, Starttime, Startdepth, Category, and Type. *Category* must be one of four codes: T for time composites, S for space composites, B for both space and time composites, or F for flow-weighted composites. The *Type* field must be a two-digit number (including leading zeros, if necessary) indicating the number of grabs, CN for continuous, or GB when the number of grabs is unknown.

Data Review and Validation

The data review and validation process combines the data validation and verification requirements defined in Task 2 with those outlined in this task. The major considerations for this process involve checks for reasonableness and verifying that quality control limits were met. Data that does not meet specifications of the QAPP will not be submitted to the TCEQ. Each anomaly that causes a data point to not meet QAPP specifications will be described in the *Data Summary* (Exhibit 4B).

Data Review Checklist

The *Data Review Checklist* (Exhibit 4A) covers three main types of review: data format and structure, data quality review, and documentation review.

The *Data Format and Structure* section includes checks for required entries and formats. This section can be automated by developing a computer program that checks the database for outliers, other data anomalies, and some types of data transcription errors. This includes checks such as:

- Are there any duplicate Tag ID numbers and are Tag Prefixes correct?
- Do the sampling dates in the Results file match those in the Events file for each Tag ID?
- Are the codes for Submitting Entity, Collecting Entity, and Monitoring Type consistent with the entity and type of monitoring conducted?
- Are the sampling dates and times in the correct format with leading zeros (MM/DD/YYYY) and (HH:MM)?

See the Data Review Checklist, Exhibit 4A, for a complete list.

The *Data Quality Review* section includes checks specific to the acceptability of the data. This requires a more in-depth review of the data by personnel that understand the results of the laboratory analyses. This section includes checks such as:

- Are the required reporting limits consistent with those in the QAPP?
- Have outliers been confirmed and a code entered into the *Verify_flg* field?
- Do the laboratory results appear reasonable and acceptable when compared to other corollary data and/or historical measurements?

- Are all sampling sites defined in the QAPP?
- Are all parameter codes listed in the QAPP?

See the Data Review Checklist, Exhibit 4A, for a complete list.

The *Documentation Review* section includes checks of the quality control information that is developed and provided by the laboratory or field staff. This section includes checks such as:

- Are blank results acceptable as specified in the QAPP?
- Were control charts used to determine the acceptability of field duplicates?
- Were there any failures in field and laboratory measurement systems that were not resolvable and resulted in unreportable data?
- Have any anomalies been reported on the *Data Summary*?
- Was the laboratory's NELAP Accreditation current for the analysis conducted?

Validating Outliers

The TCEQ establishes a minimum and maximum value for each parameter above or below which a value is considered an "outlier." The min/max values represent a statistically derived range based on historical data (e.g., 1st and 99th percentile). Reported values that are found to be outliers should be checked against field and laboratory records to verify the correctness of the value as described in Task 2. The Planning Agency Data Manager should ensure that these outliers are flagged in the data set to show that they have been confirmed. If an outlier is not flagged, the SWQMIS data loader will find the anomaly and will not accept the data. All outliers must be flagged in the Results file by the inclusion of a "1" in the *Verify_flg* field.

A file containing all parameters and their min/max levels for outlier values in SWQMIS is available upon request.

SWQMIS Validations

Planning Agencies load data sets into the test environment of SWQMIS to insure that data is formatted correctly and meets data reporting requirements described in the DMRG and Table 3.1 of the SWQM Procedures Manual. Instructions for loading data are available for download on the CRP web page in the section related to Data and Monitoring Sites

(http://www.tceq.texas.gov/waterquality/clean-rivers/data/crp-resources.html).

The SWQMIS Validator provides a report of errors in the data set relating to data structure, outliers, significant figures, and rounding for certain parameters. Some errors are over-written by the system and will not require a correction to the data files, while others are not. A full list of validations performed in SWQMIS is located in Exhibit 4D.

Once the data is free of errors, the SWQMIS Validator produces a report called the *Loading Validator Report* that contains:

- Date Range
- Tag_id Range
- Count of records in the data set
- o Parameter codes submitted with the data set and the number of times each was reported
- The minimum and maximum values submitted for each Parameter code
- Stations for which data was submitted

- Number of events at each station
- Submitting Entity / Collecting Entity / Monitoring Type codes in the data set
- Outliers in the data set
- o A comparison of data reported against the historical statistics at each station
- The ten highest and lowest values reported for each parameter

The report should be reviewed against the Monitoring Activities section of the quarterly progress report (see Exhibit 1D), the QAPP, and the *Data Summary* (Exhibit 4B) to ensure consistency in reported values and site locations.

Submitting Data to the TCEQ

Water quality data will be submitted to the TCEQ CRP Project Manager via email as a deliverable at least three times per year. The deliverable is due on March 1, August 1, and December 1 of each year. The March 1st date will ensure that all the data collected through November 30th of the prior calendar year will be submitted to the TCEQ for use in the Texas Water Quality Integrated Report. The August 1st date will ensure data is submitted prior to the close of the fiscal year, and the December 1st date ensures the TCEQ has an updated water quality database.

Each data deliverables should include data following these guidelines:

March 1st Deliverable – contains data through 11/30

August 1st Deliverable – contains data through 4/30

December 1st Deliverable – contains data through 8/31

Along with the water quality data, the Planning Agency's Data Manager provides the SWQMIS Loading Validator Report (.pdf or .html file) with a Data Summary (Exhibit 4B) to the TCEQ CRP Project Manager. The Data Summary explains data discrepancies (e.g., missing measurements), describes field and lab issues, and indicates whether the Corrective Action Process has been initiated. Corrective Action Status Reports referencing Corrective Action Plans relating to the missing measurements will be submitted with the Progress Report after they are finalized. Additionally, when data cannot be submitted due to either sampling complications or QC failures, a running tally of this data should be maintained and reported on the Data Summary to determine overall percent completeness per data submittal period.

TCEQ Data Review

TCEQ CRP Project Manager Data Review

The TCEQ CRP Project Manager utilizes the SWQMIS *Loading Validator Report* to ensure data meet QAPP specifications and contract requirements.

The Loading Validator Report is compared to the respective QAPP, the Monitoring Activities section of the quarterly progress report (see Exhibit 1D), and Data Summary to reconcile expected versus actual results. One of the most critical steps in this review is checking whether the required limits of quantitation listed in the QAPP correspond to the minimum values submitted in the data set. When discrepancies exist, the TCEQ CRP Project Manager will ask the Planning Agency to reconcile the differences and make corrections as necessary. This may require additional review of the QAPP when methods, parameter codes, or required reporting limits are changed. When all errors and discrepancies have been reconciled, the data set is approved for upload to SWQMIS.

Other Data Management Considerations

Creating New Sampling Stations and New Codes

Requests for the creation of new monitoring stations will be handled via an internet connection to the SWQMIS interface. Each Basin Planning Agency has been given access to the Monitoring Stations Module as well as the Reports Module of the SWQMIS interface. Specific instructions for requesting new sampling stations are included in Section 4.3 of the SWQMIS User's Guide at:

http://www8.tceq.state.tx.us/SwqmisWeb/help/output/index.htm?page=html/441CreatingaStationRecord.html.

Additional helpful information for creating new stations or requesting changes to existing stations can be found in chapter 3 of the DMRG at:

http://www.tceq.state.tx.us/compliance/monitoring/water/quality/data/wdma/dmrg_index.html

Requests for new codes relating to Submitting Entity, Tag Prefix, Collecting Entity and parameter codes should be coordinated with the TCEQ CRP Project Manager. The Monitoring Type codes have been set for specific data use purposes, and new codes are created only if there is a strong business need. Lists of the existing codes are available in the DMRG. The forms for submitting the requests can be found at:

http://www.tceq.state.tx.us/compliance/monitoring/water/quality/data/wdma/wdma forms.html.

Data Correction Requests

If the Basin Planning Agency finds that water quality monitoring data are in error in its database, this fact should be communicated to the TCEQ so that the same corrections are made in SWQMIS. A SWQM Data Correction Request Form should be used to specify the applicable corrections. The forms should be submitted electronically to the TCEQ CRP Project Manager. The form can be obtained at:

http://www.tceq.state.tx.us/compliance/monitoring/water/quality/data/wdma/wdma forms.html.

If a large number of errors or systematic errors are found which make use of the form unreasonable, contact your TCEQ CRP Project Manager for alternate electronic reporting methods.

Data on Basin Planning Agency Web Pages

The Basin Planning Agency should make current data available to the public, and include TCEQ-collected data if feasible (a disclaimer should be provided on the website if the complete dataset for the basin is not available). Newly available data should be added to the web at least twice annually. The Basin Planning Agency may choose to provide a link to the TCEQ water quality data to satisfy this deliverable.

CRP Data Management Training

The TCEQ may conduct data management training workshops, as needed, in response to new data management procedures or requirements. These workshops will typically be held in conjunction with other CRP training.

EXHIBIT 4A DATA REVIEW CHECKLIST

EXHIBIT 4A Data Review Checklist

This checklist is to be used by the Planning Agency and other entities handling the monitoring data in order to review data before submitting to the TCEQ. This table may not contain all of the data review tasks being conducted.

Data	Format and Structure	√ , X , or N/A
A.	Are there any duplicate Tag Id numbers in the Events file?	
B.	Do the Tag prefixes correctly represent the entity providing the data?	
C.	Have any Tag Id numbers been used in previous data submissions?	
D.	Are TCEQ station location (SLOC) numbers assigned?	
E.	Are sampling Dates in the correct format, MM/DD/YYYY with leading zeros?	
F.	Are sampling Times based on the 24 hr clock (e.g. 09:04) with leading zeros?	
G.	Is the Comments field filled in where appropriate (e.g. unusual occurrence, sampling	
	problems, unrepresentative of ambient water quality)?	
Н.	Submitting Entity, Collecting Entity, and Monitoring Type codes used correctly?	
I.	Do sampling dates in the Results file match those in the Events file for each Tag Id?	
J.	Are values represented by a valid parameter code with the correct units?	
K.	Are there any duplicate parameter codes for the same Tag Id?	
L.	Are there any invalid symbols in the Greater Than/Less Than (GT/LT) field?	
M.	Are there any Tag Ids in the Results file that are not in the Events file or vice versa?	
Data	Quality Review	√ , X , or N/A
A.	Are "less-than" values reported at the LOQ? If no, explain in Data Summary.	
B.	Have the outliers been verified and a "1" placed in the Verify_flg field?	
C.	Have checks on correctness of analysis or data reasonableness been performed?	
	e.g., Is ortho-phosphorus less than total phosphorus?	
	Are dissolved metal concentrations less than or equal to total metals?	
	Is the minimum 24 hour DO less than the maximum 24 hour DO?	
	Do the values appear to be consistent with what is expected for site?	
D.	Have at least 10% of the data in the data set been reviewed against the field and	
	laboratory data sheets?	
E.	Are all parameter codes in the data set listed in the QAPP?	
F.	Are all stations in the data set listed in the QAPP?	
Docu	mentation Review	√ , X , or N/A
A.	Are blank results acceptable as specified in the QAPP?	
B.	Were control charts used to determine the acceptability of field duplicates?	
C.	Was documentation of any unusual occurrences that may affect water quality	
	included in the Event file's Comments field?	
D.	Were there any failures in sampling methods and/or deviations from sample design	
	requirements that resulted in unreportable data? If yes, explain in Data Summary.	
E.	Were there any failures in field and/or laboratory measurement systems that were	
	not resolvable and resulted in unreportable data? If yes, explain in Data Summary.	
F.	Was the laboratory's NELAC Accreditation current for analysis conducted?	

EXHIBIT 4B EXAMPLE DATA SUMMARY

Planning Agency Data Manager: Date:	

Comments

Please explain in the table below any data discrepancies discovered during data review including:

- Inconsistencies with LOQs
- Failures in sampling methods and/or laboratory procedures that resulted in data that could not be reported to the TCEQ (indicate items for which the Corrective Action Process has been initiated and send *Corrective Action Status Report* with the applicable Progress Report).

Dataset X contains data from FYXX QAPP Submitting Entity code XX and collecting entity XX. This is field and lab data that was collected by the collecting entity. Analyses were performed by the lab name. The following tables explain discrepancies or missing data as well as calculated data loss.

Discrepancies or missing data for the listed tag ID:

Tag ID	Station ID	Date	Parameters	Type of Problem	Comment/PreCAPs/CAPs
BP00339 BP00340 BP00341 BP00342	17000 17001 13230 13229	08/16/2011	00094	Calibration	Not Calibrating/Pre-Cap #P065, *Recent probe Troubleshooting did not deal with the problem, may need to be sent for repairs
BD00921	13272	09/20/2011	00094	Unknown	CE did not provide an explanation as to why (00094) was not reported. Pre-Cap #P066
BD00915	13272	06/21/2011	00300	Field	DO value illegible
BF00267	13103	05/18/2011	00400	Unknown	CE Did not provide an explanation as to why it was not reported.
BF00269	17596	07/26/2011	00300	Field	Value was reported in percent saturated instead of μS/cm.

BA00237 BA00238 BA00239	13560 13208 18792	07/27/2011	00400	Quality	Did not report pH because value was out of range. Pre-Cap #P062.
BA00240 BA00241 BA00242	13560 13208 18792	07/27/2011	Sediment Field Parameters	Field	No Field data reported. Pre-Cap# P071
BM00456	13664	07/26/11	31699 32211 32218	Shipping	No 48 hour parameters (E. coli, pheophytin/chlorophyll) due to late cooler

Data Loss

Parameter	Missing Data points out of Total	Percent Data Loss for this Dataset	Parameter	Missing Data points out of Total	Percent Data Loss for this Dataset
00094	5/27	19%	31699	1/27	4%
00300	2/27	7%	32211	1/22	5%
00400	4/27	15%	32218	1/17	6%

Note: There were a total of 35 events, which consisted of 32 water samples, 5 of which were dry, and 3 sediment samples. Also note inconsistencies in parameters reported due to the use of 2 labs for analysis. In addition there are inconsistencies in parameters reported due to sites like X & X, where not all parameters are reported. The following are the calculations of how many values should be reported for these parameters:

*Field: 5 Dry events, 3 Sediment with no field, therefore total field parameters counted are 27 events. Why these weren't collected

*Lab events: 35 total – 10 Here – 4 field only = 21 - 3 sediment = 18 conventional – 1 partial conventional for ammonia, phos, Nit+Nit (13103) = $\frac{17}{18}$ conventionals

<u>*E.coli:</u> 5 without HT 31704, Ecoli should be 18 (17+Station 13103)+4 Presidio=22 Lab1 + 5 Lab2= <mark>27</mark>

*Chlorophyll: 17+5 Lab1= 22

*Pheophytin: 17 Lab2

EXHIBIT 4C UNDERSTANDING BIOLOGICAL EVENT DATA TAGGING

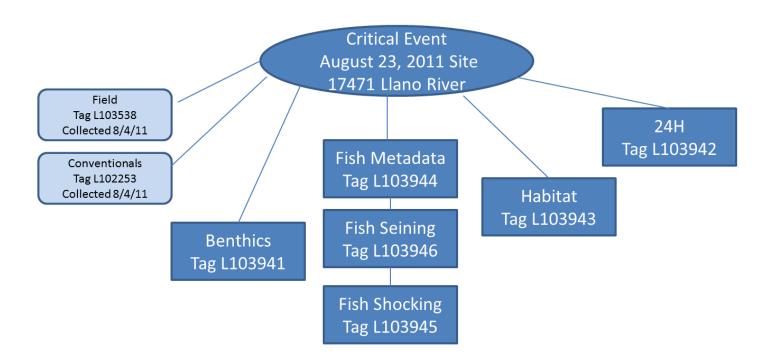

Biological Event Data

Details on how to submit biological data are in Chapter 12 of the Data Management Reference Guide

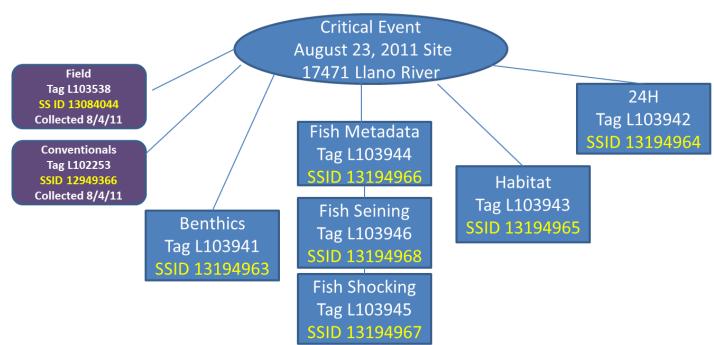

- Critical Event August 23, 2011
- Site 17471 Llano River near Junction
- Collection included: 24H, Benthic macroinvertebrates, fish, habitat
- The field and conventional data were collection 3 weeks earlier 8/4/11

Terminology

- Tag
 - L103942
- In SWQMIS a Tag is called "RFA Tag #"
- Once the Tag gets loaded into SWQMIS, the system assigns a "Sample Set Id #"
 - Tag/RFA Tag # L103942 got assigned Sample Set Id 13194964

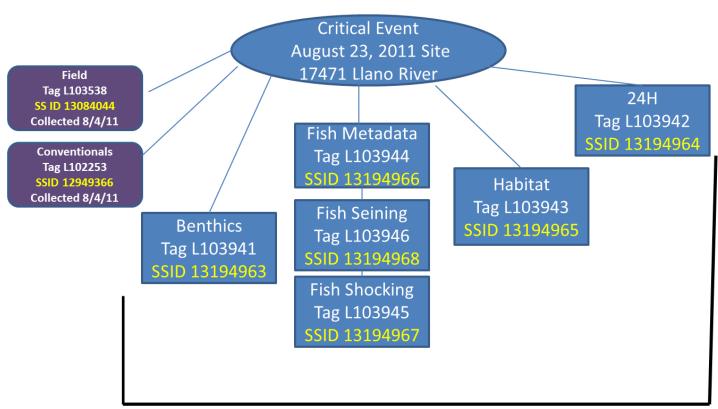

Once data are loaded to SWQMIS Production, SWQMIS assigns a Sample Set Id # (SSID) to each Tag/RFA Tag Id #

Sample Event Id # 1351024

SWQMIS runs rules on data loaded into Production, and associates data collected by the same submitting entity, at the same site, and the same day +/- 2 days The association results in a **Sample Event Id #**

ReadMe.txt

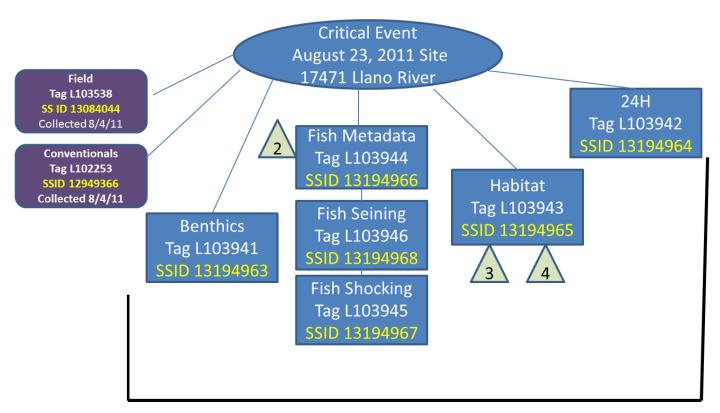

This file contains information about BLOB files. The ReadMe.txt file directs the TCEQ Data Manager where to attach each BLOB file.

	Filename	Description	Tag Id
1	17471-LlanoRiver ALM-2011 Summary Report 1.pdf	17471 Llano River Aquatic Life Monitoring Report for 2011 including sampling location map, checklist, and overall site information	Sample Event Level
2	17471-LlanoRiver ALM-23 Aug 2011 Fish Voucher Photos.pdf	17471 Llano River fish voucher photos from the August 2011 seining and shocking sampling efforts	L103944
3	17471-LlanoRiver ALM-23 Aug 2011-Habitat Transect Photos.pdf	17471 Llano River habitat transect photos from the August 2011 biological sampling event	L103943
4	17471-Llano River ALM-23 Aug 2011-Habitat Transect Worksheet.pdf	17471 Llano River habitat transect data and map from the August 2011 biological sampling event	L103943

^{*} Sample Event Id # 1351024, assigned by SWQMIS after data loaded into Production

These include site maps, the Stream Physical Characteristics Worksheet with the transect data, fish voucher photos, or other biological data related images. BLOB files must be named in a format that includes the station ID, water body name, and sample end date. BLOB files can be attached at the sample event and sample set levels in SWQMIS by authorized TCEQ staff.

Sample Event Id # 1351024

EXHIBIT 4D SWQMIS VALIDATIONS

Exhibit 4D SWQMIS Validations

The following are the initial validations performed by SWQMIS:

The following are the initial randations performed by 511 a.m.s.
Check for correct file formats as specified in the DMRG.
Check for validity of Submitting Entity, Collecting Entity, and Monitoring Type Codes.
Check for validity of StationIDs.
Check for validity of TagID prefixes.
Check for validity of Parameter Codes.
Check the Result file for duplicate Parameter Codes on unique TagIDs.
Check the Event file for duplicate TagIDs.

The following are the validation rules and SWQMIS's automated behavior:

Rule	SWQMIS Action & Examples	Notes
Water temperature (00010) must be	Auto-correction	
reported to the nearest tenth of a degree.	30.11 corrects to 30.1	
(Rule is from SWQM Procedures Manual	28.55 corrects to 28.6	
Volume 1 (10/2008), pages 3-14, Table 3.1).	30 corrects to 30.0	
pH (00400) must be reported to the nearest	Auto-correction	
tenth of a pH standard unit. (Rule is from	7.22 corrects to 7.2	
SWQM Procedures Manual Volume 1	6.88 corrects to 6.9	
(10/2008), pages 3-14, Table 3.1).	7 corrects to 7.0	
Dissolved oxygen (00300) must be reported	Auto-correction	
to the nearest tenth of a mg/L. (Rule is from	6.33 corrects to 6.3	
SWQM Procedures Manual Volume 1	4.19 corrects to 4.2	
(10/2008), pages 3-14, Table 3.1).	6 corrects to 6.0	
Specific conductance (00094) must be	Auto-correction	
reported to three significant figures when		
the value exceeds 100. (Rule is from SWQM	1014 corrects to 1010	
Procedures Manual Volume 1 (10/2008),	1267 corrects to 1270	
pages 3-14, Table 3.1).		
Salinity (00480) must be reported to the	Auto-correction	
nearest tenth of a part/thousand when the		
reported value is above 2.0. (Rule is from	3.12 corrects to 3.1	
SWQM Procedures Manual Volume 1	7.77 corrects to 7.8	
(10/2008), pages 3-14, Table 3.1).	3 corrects to 3.0	
If the Station is a freshwater or inland (brine)		Parameter must
location, do not report salinity. (Rule is from		be removed by
SWQM Procedures Manual Volume 1		submitting entity.
(10/2008), pages 3-14, Table 3.1).		

Rule	SWQMIS Action & Examples	Notes
Secchi disk (00078) must be reported to two	Auto-correction .	
significant figures. (Rule is from SWQM	0.351 corrects to 0.35	
Procedures Manual Volume 1 (10/2008),		
pages 3-14, Table 3.1).		
Days since last significant precipitation	Manual correction	
(72053) must be reported as a whole		
number. (Rule is from SWQM Procedures		
Manual Volume 1 (10/2008), pages 3-14,		
Table 3.1).		
If sample collected when raining or has	Manual correction	
rained within the last 24 hours, report a		
value of <1 for Days since last significant		
precipitation (72053) (Rule is from SWQM		
Procedures Manual Volume 1 (10/2008),		
pages 3-14, Table 3.1).		
E. coli (31699) must be reported as a whole	Auto-correction	
number with two significant digits. (Rule is		
from SWQM Procedures Manual Volume 1	854 corrects to 850	
(10/2008), pages 3-14, Table 3.1).		
E. coli (31699) must not be reported as zero.	Manual correction	
(Rule is from SWQM Procedures Manual		
Volume 1 (10/2008), pages 3-14, Table 3.1).		
Enterococcus (31701) must be reported as a	Auto-correction	
whole number and with two significant		
figures. (Rule is from SWQM Procedures	858 corrects to 860	
Manual Volume 1 (10/2008), pages 3-14,		
Table 3.1).		
Enterococcus (31701) must not be reported	Manual correction	
as zero. (Rule is from SWQM Procedures		
Manual Volume 1 (10/2008), pages 3-14,		
Table 3.1).		
Fecal coliform (31616) must be reported as a	Auto-correction	
whole number with two significant figures.		
(Rule is from SWQM Procedures Manual	1214 corrects to 1200	
Volume 1 (10/2008), pages 3-14, Table 3.1).		
Fecal coliform (31616) must not be reported	Manual correction	
as zero. (Rule is from SWQM Procedures		
Manual Volume 1 (10/2008), pages 3-14,		
Table 3.1).		

Rule	SWQMIS Action & Examples	Notes
Fecal coliform (31616) must not be reported	Manual correction	
as TNTC. (Rule is from SWQM Procedures		
Manual Volume 1 (10/2008), pages 3-14,		
Table 3.1).		
Flow (00061) values less than 10 and greater	Auto-correction	
than 0.1 must be reported to the nearest		
tenth. (Rule is from SWQM Procedures	8.62 corrects to 8.6	
Manual Volume 1 (10/2008), pages 3-14,	4 corrects to 4.0	
Table 3.1).		
Flow (00061) values greater than 10 must be	Auto-correction	
reported to the nearest whole number.		
(Rule is from SWQM Procedures Manual	15.6 corrects to 16	
Volume 1 (10/2008), pages 3-14, Table 3.1).		
Flow (00061) values less than 0.01 must be	Manual correction	
reported as <0.01. (Rule is from SWQM		
Procedures Manual Volume 1 (10/2008),		
pages 3-14, Table 3.1).		
Flow severity (01351) must be a whole	Manual correction	
number in the range of 1 through 6. (Rule is		
from SWQM Procedures Manual Volume 1		
(10/2008), pages 3-14, Table 3.1).		
If Flow (00061) is reported as zero, then	Manual correction	
Flow Severity (01351) must be reported as 1.		
(Rule is from SWQM Procedures Manual		
Volume 1 (10/2008), pages 3-14, Table 3.1).		
If Flow Severity (01351) is reported as 6,	Manual correction	
then Flow (00061) must not be reported.		
(Rule is from SWQM Procedures Manual		
Volume 1 (10/2008), pages 3-14, Table 3.1).		
Composite samples must include all required	Manual correction	
fields.		
Each TagID in the Event file must have at	Manual correction	
least one reported Result.		
Each TagID in the Result file must have a	Manual correction.	
TagID in the Event file or already in SWQMIS.		
Startdate must be before Enddate. If the	Manual correction.	
Startdate and Enddate are the same, then		
Starttime must be prior to Endtime.		
Outliers must include a '1' in the Verify_flg	Manual correction.	
field in the Result file.
